BOATING GEAR FEATURES NEW PRODUCTS TOOLS

## New Tools of the Trade From Cuda

By *BD Staff* - Aug 18, 2016

That familiar blue non-slip handle is showing up on boats and in tackle boxes all around the country. They belong to the **Cuda Brand** tools and the reason they are gaining popularity is their great function and value.

At this year's **ICAST show** where new products are often introduced, Cuda unveiled some of their new fishing tools that we can look forward to trying.

## New Tools of the Trade From Cuda

### Cuda Carbon Fiber Gaff

**Cuda gaffs** feature carbon fiber shafts so they are strong yet lightweight. The hooks are patented stainless steel and include an integrated tip protector. They also float so you don't worry if it accidentally goes overboard. Available in various lengths and head sizes.

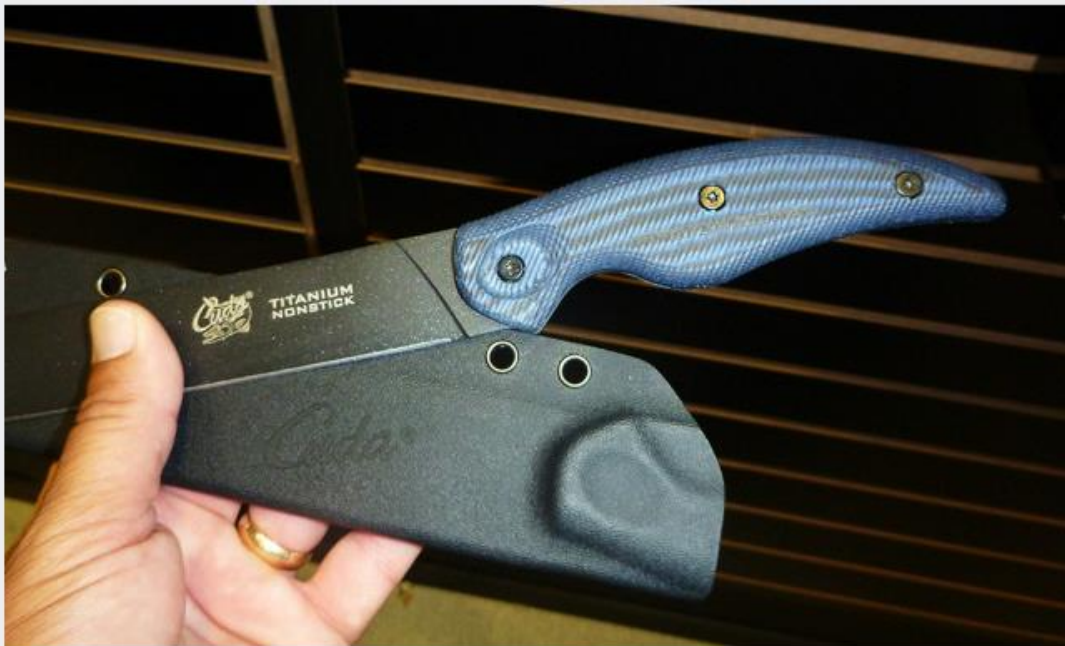

### Cuda Telescoping Harpoon

The **Cuda Telescoping Harpoon** will telescope from 35" to 73". It features a weighted and balanced aircraft aluminum shaft and is corrosion resistant. The grip is non-slip and the tool has channeled water drainage. There is a lanyard connection at the end of the shaft. Includes standard threaded shaft and dart.

### Professional Grade Knives

Cuda Professional Knives are built for the serious fisherman. With Titanium Bonded, Non-Stick USA 40A Carpenter Steel, these knives provide the ultimate level of edge retention and corrosion-resistance.

### First Aid Kits

Cuda introduces a new series of marine first aid kits designed specifically for the unique needs of anglers. Available in three sizes – personal, inshore and offshore – the kits are ideal in any fishing environment, allowing for convenient access in emergency situations.

## Jaw Spreaders

Check out Cuda's new stainless steel, patent pending **Jaw Spreaders**. When you have a fish with its mouth shut and your lure down deep, you need these jaw spreaders. Designed for one handed use for ease of hook extraction.

## Rescue Knife

Ideal for cutting rope and line in an emergency situation. The **Cuda Rescue Knife** features over-sized Cuda scale pattern bows for better grip, with dual cutting edges for right or left use. It also includes a custom sheath with rotatable clip.

## Cuda Fish Measure

Cuda introduces the new **Cuda Fish Measure**, designed with a removable straight edge starting point to ensure consistent measurements with each catch. As seen on the hit National Geographic television show, *Wicked Tuna*, the new fish measure features large, easy-to-read numbers, and is made from durable, waterproof nylon. Available in various lengths.

## Cuda Telescoping Tag Stick

The **Cuda Tag Stick** telescope's from 35" to 73". The shaft is constructed of Aluminum Alloy and is corrosion resistant. Features channeled water drainage, lanyard connection and a non-slip grip. Works with standard tag spikes and National Marine Fishery tags, which are not included.

## Cuda Connect

The new **Cuda Connect** is made to easily convert your Cuda Harpoon or Tag Stick into a personal camera stick.

Compatible with popular cameras, this quick tool is perfect for capturing the moment at new angles.

Visit the **Cuda Brand website** for information

about these and many other great fishing tools and accessories.
