The **Cuda Offshore Gloves** (\$57.49; [cudabrand.com](http://cudabrand.com)) help fishermen safely and effectively perform multiple tasks while on the water. The gloves are constructed with extra-strong padding and materials, including a Kevlar palm that is cut-resistant. The gloves are water repellent and have a pull loop for easy removal.

The **Clarion M608 Marine System** ([clarion.com](http://clarion.com)) is IP55 rated and certified to provide the best saltwater protection in its class, a front panel where it's most exposed to the elements. Internally, rubber gaskets stop water, and integrated drainage channels keep water out, even if water manages to seep into the console. The display on the M608 allows characters to be displayed clearly in all lighting conditions. Fishermen can control up to four independent audio zones on the same vessel while connecting the unit to their iPhones, iPads, or
