

# Examine the DMT® Difference for Yourself

*Diamond abrasives provide the fastest, easiest and most effective way to sharpen an edge. Unrivaled in both performance and durability, DMT® brand sharpeners have earned the reputation as the best sharpening products on the planet.*

## The DMT® Difference

Since 1976, DMT® has been in business to do just one thing: make the world's best diamond sharpeners. Product innovations such as our signature polka-dot interrupted surface, and others with our continuous surface of high-performance diamond, are praised worldwide for their superior quality. From pocket-sized whetstones to heavy-duty bench stones, the difference arrives time and again through our undivided pursuit of sharpening excellence.

## Quality Must Be Manufactured, Not Fabricated

**Diamond Coverage** differs widely from one manufacturer to the next. For long-lasting performance, DMT® makes certain that each sharpening surface carries the most diamonds per square inch in the industry.

**Diamond Uniformity** is also key to sharpener performance. DMT® uses a proprietary process that ensures near-perfect consistency in grit size. The result is a micronized monocrystalline diamond that covers evenly across the sharpening surface to prove effective with every use, year after year.

### ***Beware of imitators!***

*The DMT® sharpening surface (left) exhibits full coverage and the diamonds show striking consistency in size to ensure peak performance and durability. The copycat surface (right) carries a sparse, patchy coating made from a jumble of different sized diamonds.*

**Surface Flatness** can mean the difference between a well-honed tool and one that is barely serviceable. Flat surfaces maintain consistent, even contact with the edge to produce a bevel that carries the same degree of sharpness from end to end. DMT® sharpeners are engineered to be the flattest on the market, and built to outlast other products, which are variable in surface, and often warped, hollowed or grooved.

### Start Experiencing the Difference Today

When compared under every condition related to diamond quality and sharpener performance, it becomes clear that DMT® products truly have no competition. Proving more than just the best way to produce a first-rate edge, our sharpeners save you from coping with an entire toolbox of second-rate ones. That's why you owe it to yourself, and your tools, to choose nothing less than a DMT® diamond sharpener. Take a look at our full line of products and place your order today!

### ***DMT® gives it to you straight.***

*Like all DMT® sharpeners, the Diamond Whetstone™ (left) proves flat every time. When tested against a precision straight edge, no light appears between the sharpening surface and straight edge. The copycat whetstone (right) may look similar to a Diamond Whetstone™, but when tested for flatness the difference is obvious. The light shines through to reveal a surface that fails to prove flat.*

### **How does DMT® compare to drag-through sharpeners?**

The difference between an edge created by a DMT® sharpener (left) and one made with a typical drag-through sharpener (right) is obvious under the microscope. The DMT® sharpener produces a clean, razor-sharp edge while the drag-through sharpener leaves a trail of metal burrs that quickly bend and flake off with use.
